Quine-McCluskey Algorithm Example II

Shane Sheehan ¹

¹ADAPT
Trinity College Dublin

January 29, 2017

Today's Overview

- 1 Introduction
- 2 4 Variables
- 3 Don't cares
- 4 Petrick's method
- 5 Problems?

Quine-McCluskey Overview I

So a few more examples where we fins:

- A minimum-cost sum-of-products implementation [Majumder et al., 2015]

for a Boolean function.

Quine-McCluskey Overview II

Main steps in the Quine-McCluskey algorithm:

- 1 Generate Prime Implicants
- 2 Construct Prime Implicant Table
- 3 Reduce Prime Implicant Table
 - 1 Remove Essential Prime Implicants
 - 2 Row Dominance
 - 3 Column Dominance
- 4 Solve Prime Implicant Table

Simple Example I

$$F(x_0, x_1, x_2) = \sum m(0, 1, 2, 4, 5, 7)$$

| | x_2 | x_1 | x_0 | y |
|----|-------|-------|-------|-----|
| 0: | 0 | 0 | 0 | 1 |
| 1: | 0 | 0 | 1 | 1 |
| 2: | 0 | 1 | 0 | 1 |
| 3: | 0 | 1 | 1 | 0 |
| 4: | 1 | 0 | 0 | 1 |
| 5: | 1 | 0 | 1 | 1 |
| 6: | 1 | 1 | 0 | 0 |
| 7: | 1 | 1 | 1 | 1 |

Simple Example II

| | x_2 | x_1 | x_0 | |
|----|-------|-------|-------|---|
| 0: | 0 | 0 | 0 | → |
| 1: | 0 | 0 | 1 | → |
| 2: | 0 | 1 | 0 | → |
| 4: | 1 | 0 | 0 | → |
| 5: | 1 | 0 | 1 | → |
| 7: | 1 | 1 | 1 | → |

Iteration 0:

- ✓ – Prime Implicants
- → – Non Prime Implicants

Simple Example III

| | x_2 | x_1 | x_0 | |
|-------|-------|-------|-------|---|
| 0, 1: | 0 | 0 | - | → |
| 0, 2: | 0 | - | 0 | ✓ |
| 0, 4: | - | 0 | 0 | → |
| 1, 5: | - | 0 | 1 | → |
| 4, 5: | 1 | 0 | - | → |
| 5, 7: | 1 | - | 1 | ✓ |

Iteration 1:

- ✓ – Prime Implicants
- → – Non Prime Implicants

Simple Example IV

0, 1, 4, 5:

| x_2 | x_1 | x_0 |
|-------|-------|-------|
| - | 0 | - |

✓

Iteration 2:

- ✓ – Prime Implicants
- → – Non Prime Implicants

Simple Example V

Prime Implicant Table:

| | x_2 | x_1 | x_0 | 0 | 1 | 2 | 4 | 5 | 7 |
|-------------|-------|-------|-------|---|---|---|---|---|---|
| 0, 1, 4, 5: | - | 0 | - | ○ | ● | | ● | ○ | |
| 0, 2: | 0 | - | 0 | ○ | | ● | | | |
| 5, 7: | 1 | - | 1 | | | | | ○ | ● |

We have..

- x_1'
- $x_2'x_0'$
- x_2x_0

Simple Example VI

Prime Implicant Table:

| | x_2 | x_1 | x_0 | 0 | 1 | 2 | 4 | 5 | 7 |
|-------------|-------|-------|-------|---|---|---|---|---|---|
| 0, 1, 4, 5: | - | 0 | - | ○ | ● | | ● | ○ | |
| 0, 2: | 0 | - | 0 | ○ | | ● | | | |
| 5, 7: | 1 | - | 1 | | | | | ○ | ● |

So we get the SOP:

$$\blacksquare x_1' + x_2'x_0' + x_2x_0$$

| | | | | |
|-------|-------|-------|-------|--------------|
| | x_2 | x_1 | x_0 | |
| 1, 3: | 0 | - | 1 | (\times) |

$$F(x_0, x_1, x_2, x_3) = \sum m(4) + \sum d(1, 3)$$

- x denotes *Don't Cares*

Solving the Table I

| | x_2 | x_1 | x_0 | y |
|----|-------|-------|-------|-----|
| 0: | 0 | 0 | 0 | 0 |
| 1: | 0 | 0 | 1 | 1 |
| 2: | 0 | 1 | 0 | × |
| 3: | 0 | 1 | 1 | × |
| 4: | 1 | 0 | 0 | 1 |
| 5: | 1 | 0 | 1 | 1 |
| 6: | 1 | 1 | 0 | × |
| 7: | 1 | 1 | 1 | 0 |

| | x_2 | x_1 | x_0 | |
|----|-------|-------|-------|---|
| 1: | 0 | 0 | 1 | → |
| 2: | 0 | 1 | 0 | → |
| 3: | 0 | 1 | 1 | → |
| 4: | 1 | 0 | 0 | → |
| 5: | 1 | 0 | 1 | → |
| 6: | 1 | 1 | 0 | → |

| | x_2 | x_1 | x_0 | |
|-------|-------|-------|-------|-----|
| 1, 3: | 0 | - | 1 | ✓ |
| 1, 5: | - | 0 | 1 | ✓ |
| 2, 3: | 0 | 1 | - | (×) |
| 2, 6: | - | 1 | 0 | (×) |
| 4, 5: | 1 | 0 | - | ✓ |
| 4, 6: | 1 | - | 0 | ✓ |

$$F(x_0, x_1, x_2, x_3) = \sum m(1, 4, 5) + \sum d(2, 3, 6)$$

■ x denotes *Don't Cares*

Solving the Table II

| | x_2 | x_1 | x_0 | 1 | 4 | 5 |
|-------|-------|-------|-------|---|---|---|
| 1, 3: | 0 | - | 1 | ○ | | |
| 1, 5: | - | 0 | 1 | ○ | | ○ |
| 4, 5: | 1 | 0 | - | | ○ | ○ |
| 4, 6: | 1 | - | 0 | | ○ | |

Whoops.. What to do?

Solving the Table III

| | x_2 | x_1 | x_0 | 1 | 4 | 5 |
|-------|-------|-------|-------|---|---|---|
| 1, 3: | 0 | - | 1 | ○ | | |
| 1, 5: | - | 0 | 1 | ○ | | ○ |
| 4, 5: | 1 | 0 | - | | ○ | ○ |
| 4, 6: | 1 | - | 0 | | ○ | |

Use Petrick's method

- Determine all minimum Sum-Of-Products (SOP) solutions

Solving the Table IV

- 1 Label the rows of the reduced prime implicant chart P_1, P_2, P_3, P_4 , etc.
- 2 Form a logical function P which is true when all the columns are covered.
- 3 Reduce P to a minimum sum of products by multiplying out and applying $X + XY = X$.
- 4 Each term in the result represents a solution, that is, a set of rows which covers all of the minterms in the table. To determine the minimum solutions, first find those terms which contain a minimum number of prime implicants.
- 5 Next, for each of the terms found in step five, count the number of literals

Solving the Table V

- 6 Choose the term or terms composed of the minimum total number of literals, and write out the corresponding sums of prime implicants.

Remember

- P consists of a product of sums where each sum term has the form $(P_{i0} + P_{i1} + \cdots + P_{iN})$, where each P_{ij} represents a row covering column i .
- You saw this process with SAR

Solving the Table VI

| | x_2 | x_1 | x_0 | 1 | 4 | 5 |
|-------|-------|-------|-------|---|---|---|
| 1, 3: | 0 | - | 1 | ○ | | |
| 1, 5: | - | 0 | 1 | ○ | | ○ |
| 4, 5: | 1 | 0 | - | | ○ | ○ |
| 4, 6: | 1 | - | 0 | | ○ | |

We have the implicants:

- $x_2'x_0 \equiv p_0$
- $x_1'x_0 \equiv p_1$
- $x_2x_1' \equiv p_2$
- $x_2x_0' \equiv p_3$

Solving the Table VII

$$\begin{aligned}(p_0 + p_1)(p_2 + p_3)(p_1 + p_2) &\equiv (p_0p_2 + p_0p_3 + p_1p_2)(p_1p_2) \\ &\equiv (p_0p_2 + p_1p_2 + p_1p_3)(p_1p_2) \\ &\equiv (p_0p_1p_2 + p_0p_2 + p_0p_2p_3 + p_1p_2 + p_1p_3 + p_1p_2p_3) \\ &\equiv (p_0p_2 + p_1p_2 + p_1p_3)\end{aligned}$$

Minimal boolean Expression

$$y = (x_2'x_0) + (x_2x_1')$$

Painful.. a computer does not mind (if you have a lot of time)!

And now relax

Next time.. Flip Flops and Latches

- No more simplification! zzz
